

Integrates with Your Team

Tonnage Reporting & Product Renewals	New Product Submissions	Consultation
Complete tonnage reports and product renewal applications through forms and via online portals using the information provided by your team.	Submitting new product applications using labels, analysis, and SDS that are already developed.	Review labels for compliance across multiple states and identify gaps.
Compile data to prepare a tonnage report for submission.	Developing label content and design. Developing SDS, in collaboration with health and safety experts or by amending current ones.	Consult with state and regulatory agencies on behalf of your company.
This includes tracking deadlines as needed to not fall behind.	Coordinating testing requirements for products, and communicating with labs on sample submissions. Verification of test results against standards, thresholds, and label guarantees.	Research regulatory requirements for specific products and ingredients.
Ensuring product labels and label changes are captured throughout all states and approval agencies.	Developing a framework for standard operating procedures (manufacturing process) and completing these through internal input. Compiling ingredient lists as required for OMRI, OIM and CFIA.	Consistently update on changes and new regulations.
